

B6006 - Light Booth

We are pleased to present our Optike Brand B6006 Light Booth, which facilitates important color selection and trustworthy color evaluation to prevent needless changes. Products defects, color inconsistencies, metamerism effects (an optical phenomenon in which a pair of samples appears to match under one light source but not under another), and the effects of optical brightener agents (OBAs) can all be found by visually evaluating items and parts next to each other and under different light sources using a light booth.

D65 Light source

TL84 Light source

CWF Light source

TL83 Light source

F Light source

UV Light source

Product Specifications:

SI No	Light Sources Name	Specifications	Color Temperature	Description
